

The article is about a software utility used to temporarily lock a flash disk. It is designed as an easy way to ensure that computers are secure from unauthorized access, whether by children or thieves. There are two parts. The first part covers the general background of the software and how it works for those who don't know anything about it yet or who have not used it themselves. The second part goes into detail about the preferences and features that allow for a better understanding of this software if one would like them to use it in their own work environment, which includes explaining what happens after the lock has been applied and how many times you can apply one with this utility before you have to purchase another key. This article is for those who already know how to use the Flash Disk Lock 1.7 software and are planning to purchase it. They can easily navigate through the article and quickly find everything they need to know about the software, including this article's downloadable package which includes everything you need to know about this software before purchasing it. What is inside of the package will help you understand whether it's catered towards your specific needs or if you would want something else instead. Flash Disk Lock 1.7 is designed to provide users with an easy way of securing their flash disks from unauthorized access, whether by children at home or thieves trying to steal them from their caretakers. By default, the software is set to lock any SD card, SDHC card, MMC card, Memory Stick Pro Duo, Memory Stick Duo, xD-Picture Card or USB device. It supports any flash disk that is formatted in FAT16 or FAT32. The software will automatically apply a lock to any computer that does not have a username or password set. It also has the option of locking the computer for one minute up to twenty-four hours. This way, it can ensure that no one gets access to any information which they are not supposed to have access to. Flash Disk Lock 1.7 is easy for you to set up and simple to use. The preferences are used to configure the software for your own needs. There are four buttons that allow you to set up your preferences which include changing the lock time, allowing 8 users, allowing 2 users and disabling the lock. Each of these buttons has its own part in the article so that you can quickly see how to use it. As mentioned earlier, this software can be easily set up to be used on your computer. It is simple and easy for people who would like their flash disks locked to know what they need to do in order to apply the software onto their computer. The first steps include opening up either Windows Explorer or Finder and then locating where you put this utility onto your flash disk. You can then right-click it and select "Lock Disk". This will timeout the lock allowing anyone to access the flash disk again. Once you have used this tool, you will have a solid understanding of how it works and how comfortable you would want to use it in your own work environment. The preferences section is where one can set up a longer or shorter time for their lock so that they can use the software more quickly if needed. It also allows for multiple users across computers with the second option which is between two users. Lastly, there is a time before applying your key that is used when no one else has set the software up in the computer and therefore affects its operation.
